

# Syndicated Loan Market Poised for Technology Adoption

June 22, 2021

Executive Summary:

Loan markets have been busy this past year. But despite the uptick in issuance, trading volume and investor demand, trading of par and leveraged loans remains largely manual. By most accounts, today's loan market looks the same as the corporate bond market did 20 years. Some trading via request-for-quote (RFQ) exists, but the majority of trading is done via the phone, and most pricing data comes from scraped chat messages.

Past attempts to inject technology into this critical market have largely failed, but following a technology surge at the hands of working from home in 2020, change now feels possible. For instance, electronic trading in high-yield bonds jumped to over a quarter of the all-to-all market in 2020, a level that only five years ago felt impossible.

Further, traders forced to work somewhere other than near their trading assistants and operations teams quickly realized electronically trading orders made their life a whole lot easier. And we can't forget about the newfound maturity of distributed ledger technology (DLT), now well positioned to help the loan market's complex settlement process.

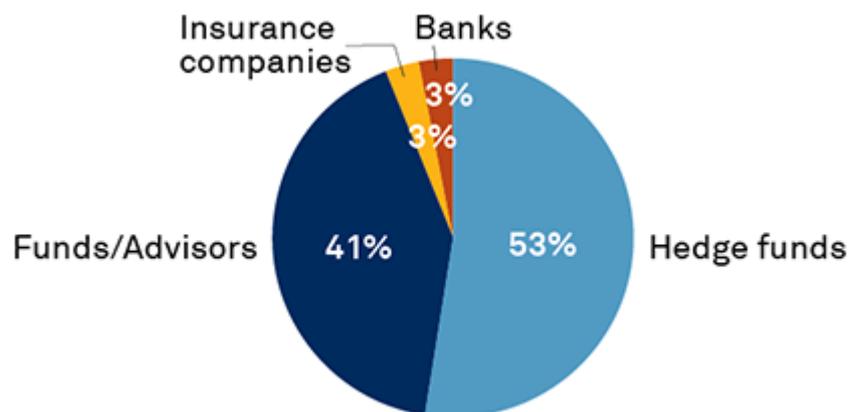

Markets do not, of course, electrify overnight. Even with the right technology and market participant willingness, such behavioral change takes time. Loans markets bring their own set of market-structure complexities that require solutions not found in other fixed-income markets—incentives to trade with the loan agent, two-week settlement times and a lack of consistent market data.

Based on our research and conversations with loan market participants, we believe the willingness to change this market now exists and the technology needed to improve the end-to-end workflow is ready for prime time.

Methodology:

This research is based on conversations with 82 institutional loan investors in the United States in 2020. Interviews were also conducted with loan agents, dealers and electronic-trading platforms in the spring of 2021. Conversations focused on the current market structure for trading and investing in leveraged loans, and expected adoption of new technology and electronic trading in the coming years.

## Distribution of Total Trading Volume, by Institution Type

Note: Based on 82 respondents.

Nor should this Document, or any part of it, form the basis to be relied upon in any way in connection with any contract relating to any securities. The Document is not an investment analysis or research and is not subject to regulatory or legal obligations on the production of, or content of, investment analysis or research.

The data contained in the Document is based upon a particular bank's scope, which reflects a bank's data submission, business structure, and sales revenue Reporting methodology. As a result, any data contained in the Document may not be directly comparable to data presented to another bank. For franchise benchmarking, Crisil Coalition Greenwich has implemented equal ranking logic on aggregate results i.e., when sales revenues are within 5% of at least one competitor ahead, a tie is shown and designated by = (where actual ranks are shown). Entity level data has no equal ranking logic implemented and therefore, on occasion, the differences between rank bands can be very close mathematically.

The data in this Document may reflect the views reported to Crisil Coalition Greenwich by the research participants. Interviewees may be asked about their use of and demand for financial products and services and about investment practices in relevant financial markets. Crisil Coalition Greenwich compiles the data received, conducts statistical analysis and reviews for presentation purposes to produce the final results.
