

Making the Case for Portfolio Trading

July 27, 2021

Executive Summary:

Corporate bond markets have shown their excitement for portfolio trading over the past year, as volumes increased on an absolute and relative basis compared with the overall market. While the trading mechanism still represents just 3-5% of the total market, it appears to be one of the rare innovations that is equally fascinating to both the dealer and buy-side community.

Investors appreciate portfolio trading for its ability to provide price improvement, particularly on more thinly traded names, and as a time-saver when compared to trading all of the bonds in the portfolio individually. The sell side likes portfolio trading because it allows for diversification of risk with a broader basket of bonds.

One could argue that its presence in the market was both a cause and effect of new nonbank liquidity providers entering the space, and a major driver behind the big technology push of the top bank dealers to provide quicker and tighter prices to their clients.

Portfolio trading, of course, isn't for every firm and every trade all the time. But there is a case to be made that, in many situations, portfolio trading offers price improvement for a wider array of market participants than are utilizing it today. In this report, we bring together feedback received from major market participants and a quantitative analysis of portfolio trade executions to explain portfolio trading, when it works, when it does not, and what to expect from this innovation going forward.

Methodology:

This research is based on conversations held during the second quarter of 2021 with banks, market makers, asset managers, hedge funds, and trading venues currently engaged in portfolio trading. The analysis also includes data from our annual Market Structure & Trading Technology Study, conducted in the fourth quarter of 2020, that includes responses from 157 global fixed-income investors. Data from FINRA, Tradeweb, Bloomberg, and ICE were also used to size the market and examine execution quality throughout 2020.

Respondents

Note: Based on 157 respondents. May not total 100% due to rounding.

This Document may contain analysis of commercial data relating to revenues, productivity and headcount of financial services organisations (together with any other commercial information set out in the Document). The Document may also include statements, estimates and projections with respect to the anticipated future performance of certain companies and as to the market for those companies' products and services.

The Document does not constitute (or purport to constitute) an accurate or complete representation of past or future activities of the businesses or companies considered in it but rather is designed to only highlight the trends. This Document is not (and does not purport to be) a comprehensive Document on the financial state of any business or company. The Document represents the views of Crisil Coalition Greenwich as on the date of the Document and Crisil Coalition Greenwich has no obligation to update or change it in the light of new or additional information or changed circumstances after submission of the Document.

This Document is not (and does not purport to be) a credit assessment or investment advice and should not form basis of any lending, investment or credit decision. This Document does not constitute nor form part of an offer or invitation to subscribe for, underwrite or purchase securities in any company. Nor should this Document, or any part of it, form the basis to be relied upon in any way in connection with any contract relating to any securities. The Document is not an investment analysis or research and is not subject to regulatory or legal obligations on the production of, or content of, investment analysis or research.

The data contained in the Document is based upon a particular bank's scope, which reflects a bank's data submission, business structure, and sales revenue Reporting methodology. As a result, any data contained in the Document may not be directly comparable to data presented to another bank. For franchise benchmarking, Crisil Coalition Greenwich has implemented equal ranking logic on aggregate results i.e., when sales revenues are within 5% of at least one competitor ahead, a tie is shown and designated by = (where actual ranks are shown). Entity level data has no equal ranking logic implemented and therefore, on occasion, the differences between rank bands can be very close mathematically.

The data in this Document may reflect the views reported to Crisil Coalition Greenwich by the research participants. Interviewees may be asked about their use of and demand for financial products and services and about investment practices in relevant financial markets. Crisil Coalition Greenwich compiles the data received, conducts statistical analysis and reviews for presentation purposes to produce the final results.
