

Stablecoins Rock the Boat, Clarity Needed to Calm the Waters

November 9, 2021

Executive Summary:

Stablecoins are digital tokens pegged to major currencies or commodities and are often backed by transparent reserves, though not all follow this logic. Major stablecoins today include USDC, Dai and USDT. The majority of stablecoins are backed 1:1 by dollars and dollar equivalents, though issuers continue to provide further transparency into reserves. Regulators are demanding increasing visibility and accountability.

Stablecoins have the potential to enable greater access to the financial system for millions of Americans. They can give the unbanked access to the financial system and provide instant settlement and lower fees to the unbanked as well as a variety of other market participants. Moreover, stablecoins also have the potential to bring programmable money to the mass market, based on digital transfers of value using smart contracts.

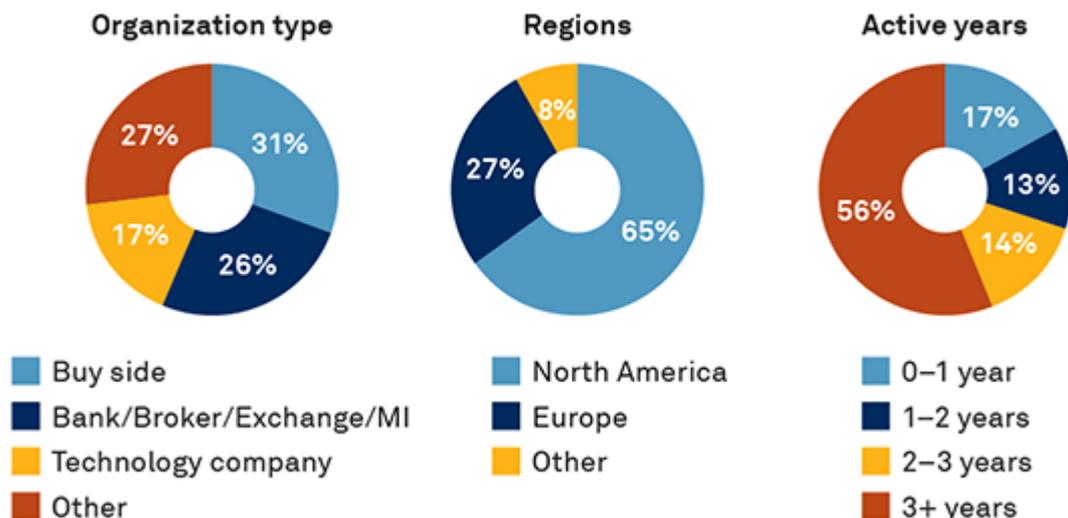

To get a better sense of the current adoption of stablecoins, we conducted interviews with an informed audience of market participants focused on implementing blockchain solutions for capital markets, 70% of whom are at least somewhat focused on implementing blockchain solutions, with 45% very or extremely focused. Stablecoins are a real financial innovation and very promising. But the question remains whether they represent innovation for an interim period before central bank digital currencies (CBDCs) become available, or if they are truly “stable” and will serve as the financial rails for millions of Americans and global users, with a special focus on the highway on-ramps to the decentralized financial system (DeFi).

Methodology:

In July of 2021, we interviewed 108 executives at financial institutions and technology firms to better understand use cases, deployments, preferences, benefits, disadvantages, and the overall appeal of stablecoins. Respondents comprised asset managers, banks, brokers, exchanges, market infrastructures, technology companies, and other market participants.

We spoke with professionals in various roles across the front office, technology/operations/risk, senior management, and strategy teams. Over half of the respondents have been active in digital assets or blockchain technology for three years or more.

This Document may contain analysis of commercial data relating to revenues, productivity and headcount of financial services organisations (together with any other commercial information set out in the Document). The Document may also include statements, estimates and projections with respect to the anticipated future performance of certain companies and as to the market for those companies' products and services.

The Document does not constitute (or purport to constitute) an accurate or complete representation of past or future activities of the businesses or companies considered in it but rather is designed to only highlight the trends. This Document is not (and does not purport to be) a comprehensive Document on the financial state of any business or company. The Document represents the views of Crisil Coalition Greenwich as on the date of the Document and Crisil Coalition Greenwich has no obligation to update or change it in the light of new or additional information or changed circumstances after submission of the Document.

This Document is not (and does not purport to be) a credit assessment or investment advice and should not form basis of any lending, investment or credit decision. This Document does not constitute nor form part of an offer or invitation to subscribe for, underwrite or purchase securities in any company. Nor should this Document, or any part of it, form the basis to be relied upon in any way in connection with any contract relating to any securities. The Document is not an investment analysis or research and is not subject to regulatory or legal obligations on the production of, or content of, investment analysis or research.

The data contained in the Document is based upon a particular bank's scope, which reflects a bank's data submission, business structure, and sales revenue Reporting methodology. As a result, any data contained in the Document may not be directly comparable to data presented to another bank. For franchise benchmarking, Crisil Coalition Greenwich has implemented equal ranking logic on aggregate results i.e., when sales revenues are within 5% of at least one competitor ahead, a tie is shown and designated by = (where actual ranks are shown). Entity level data has no equal ranking logic implemented and therefore, on occasion, the differences between rank bands can be very close mathematically.

The data in this Document may reflect the views reported to Crisil Coalition Greenwich by the research participants. Interviewees may be asked about their use of and demand for financial products and services and about investment practices in relevant financial markets. Crisil Coalition Greenwich compiles the data received, conducts statistical analysis and reviews for presentation purposes to produce the final results.
