

Electronification and Market Access Drive Alpha in Asian Bond Markets

January 20, 2022

Executive Summary:

Portfolio managers aren't the only ones generating alpha. While trading was once only a necessary cost for implementing an investment strategy, trading desks today—with the right market access, platform technology and data—routinely act as alpha contributors, as they strive to beat execution expectations.

While this is true in many markets around the world, the gap between reality and opportunity is noticeably wider in Asian bond markets. Although electronic trading adoption and market transparency have increased in the last decade, market norms grounded in local culture and traditional relationships, and diverse, varied regulatory regimes continue to leave global bond investors yearning for the more structured, electronic markets of Europe and the United States.

Progress in electronification is apparent, but the roadblocks to significant change cannot be underestimated. Changing cultural norms is often harder than changing the technology itself. Relationships are still critical when trading bonds, and so fears that e-trading will disrupt those long-held partnerships leave many in Asia nervous. And on both buy and sell side, many are as yet unconvinced by the cost-benefit analysis of e-trading—even while execution cost-savings in the U.S. and most of Europe continue to rise as data and technology improve.

For Asian bond markets to truly realize their potential on the global stage, these roadblocks must be overcome. Increasing the adoption of e-trading is not just about easing the burden on traders or helping investment funds generate more alpha. E-trading almost always brings with it greater price transparency, which then results in improved liquidity—and improved liquidity can lead to greater demand for those bonds. Greater demand for bonds means lower borrowing costs for the companies and countries borrowing to drive the entire economy forward.

We are not suggesting e-trading is a main driver of broad economic growth, of course, but evidence suggests

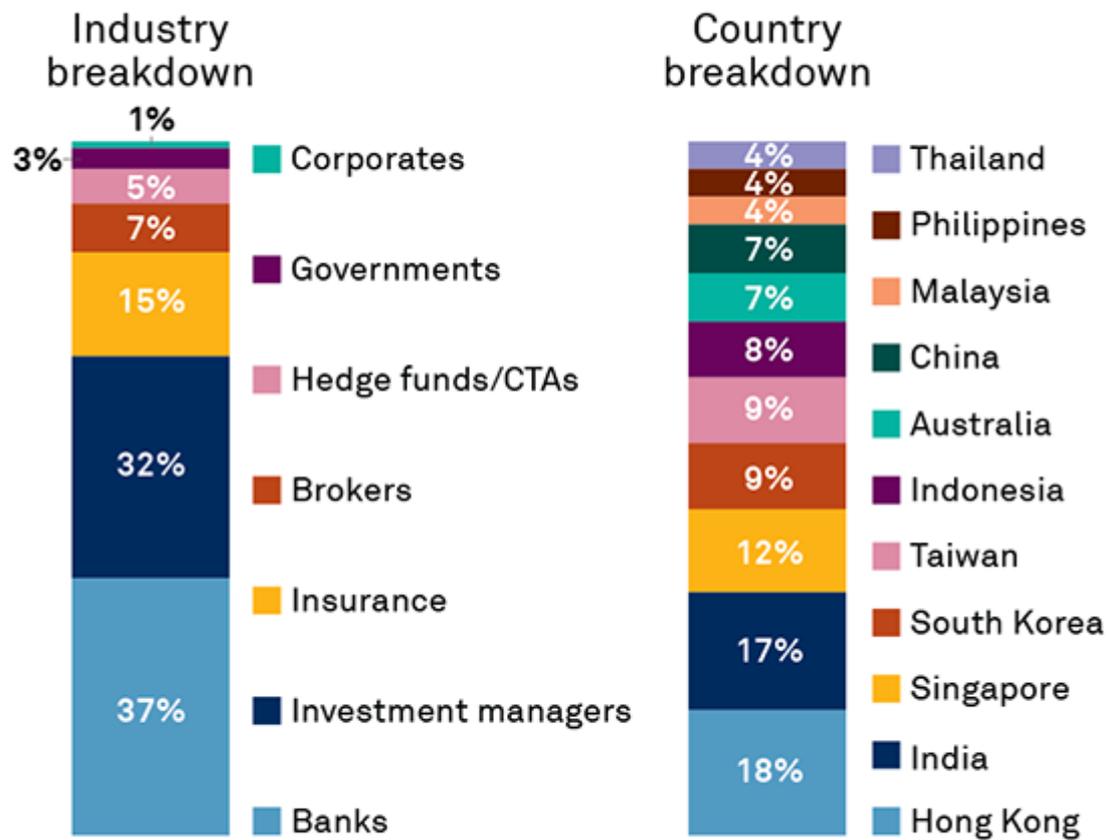

that e-trading helps create more efficient capital markets that ultimately allow the world to grow and improve.

This research, based on interviews with 700 Asian bond investors trading over \$2 trillion of domestic- and hardcurrency bonds in 2020, examines the current state of fixed-income e-trading in Asia, roadblocks to progress and areas for growth in the coming years.

Methodology:

This research is based on interviews with 700 Asia-based fixed-income investors in late 2020, and conversations with Asia-based dealers and platform providers in 2Q 2021. Topics included dealer relationships, trading volumes, electronic trading adoption, and market structure changes.

Respondents

Note: Based on 711 respondents.

This Document does not constitute nor form part of an offer or invitation to subscribe for, underwrite or purchase securities in any company. Nor should this Document, or any part of it, form the basis to be relied upon in any way in connection with any contract relating to any securities. The Document is not an investment analysis or research and is not subject to regulatory or legal obligations on the production of, or content of, investment analysis or research.

The data contained in the Document is based upon a particular bank's scope, which reflects a bank's data submission, business structure, and sales revenue Reporting methodology. As a result, any data contained in the Document may not be directly comparable to data presented to another bank. For franchise

benchmarking, Crisil Coalition Greenwich has implemented equal ranking logic on aggregate results i.e., when sales revenues are within 5% of at least one competitor ahead, a tie is shown and designated by = (where actual ranks are shown). Entity level data has no equal ranking logic implemented and therefore, on occasion, the differences between rank bands can be very close mathematically.

The data in this Document may reflect the views reported to Crisil Coalition Greenwich by the research participants. Interviewees may be asked about their use of and demand for financial products and services and about investment practices in relevant financial markets. Crisil Coalition Greenwich compiles the data received, conducts statistical analysis and reviews for presentation purposes to produce the final results.
