

Tokenization of Financial Instruments Reshapes Traditional Finance

November 30, 2023

In the ever-evolving landscape of capital markets, the relentless march of tokenization is reshaping the industry. Traditional financial institutions, often perceived as slow to adopt innovations, are now making decisive moves into production beyond proofs of concept (POCs), pilots and sandboxes.

This shift marks a significant turning point, emphasizing that tokenizing financial assets extends far beyond real estate, art, venture capital, and private equity. As we delve into this transformative journey, it's evident that the market is closely watching developments in places like Singapore and Switzerland and learning from these pioneering models.

The “Bonding” of Tradition and Blockchain

One illustration of this shift is the tokenization of bonds. In 2022, UBS pioneered the world's first [digital bond](#) issued by a banking institution, trading and settling on both blockchain-based and traditional platforms (with an issue volume of CHF 375million). Moreover, the European Investment Bank (EIB) and Société Generale have also embraced experimentation with [crypto-native bond](#) issuance.

And while this market appears as only a tiny sliver of the traditional bond market (e.g., the [tokenization of U.S. Treasuries](#) is only around \$800M, according to RWA.xyz), vertically integrated models like those in Switzerland, and well-supported ecosystems as in Singapore have inspired the industry nonetheless. Further activities are popping up, including [private credit](#) loans to businesses on Ethereum and other networks.

The momentum has continued across 2023, with major players such as Deutsche Bank, Goldman Sachs, HSBC, BNP Paribas, and RBC Capital Markets actively participating in various digital bond initiatives. Goldman, for instance, unveiled its own [tokenization platform](#) using the vendor Digital Asset, where it will support reduced bond issuance times.

To move out of pilots and POCs into the real world, settlements, payments and full life-cycle integration of these assets are becoming focal points for banks, as they refine or adopt new infrastructure and leverage third-party platforms to accommodate distributed-ledger technology (DLT).

Tokenization of bonds is clearly early stage and not going to replace traditional issuance soon. But the momentum of activity in repo, for example (e.g., Broadridge's DLT platform), inspires confidence and suggests there's an appetite beyond basic experimentation, and if there are gains to be made, banks will continue to push new models across both issuance and trading.

Tokenization Opportunities Take Center Stage

Traditional financial institutions are not merely paying attention—they are actively engaging with the opportunities that tokenization on the blockchain present. In 2023, infrastructure players and sell-side firms are not merely testing the waters but building bridges. For instance, the [New York Fed](#) has tested tokenized deposits with R3's Regulated Liability Network (RLN), while [J.P. Morgan Onyx](#) is also laying out plans to tokenize deposits for settlements.

Conversations with industry leaders also reveal a resonance around industry projects like the [Canton Network](#) and [Project Guardian](#), with public chains such as [Avalanche](#) and Polygon also being leveraged for tokenization. Avalanche, for instance, is being tested by a number of traditional [buy-side](#) (e.g., T. Rowe and Wellington) and sell-side firms for both on-chain execution and settlement.

Project Guardian, which is under the Monetary Authority of Singapore, has uniquely become the epicenter of tokenization opportunities, with at least five tokenization pilots taking place among 17 financial institutions across the full life cycle of listing, distribution, trading, settlement, and asset servicing. Regulators across the U.S., Europe and Asia are taking note.

Navigating Public and Private Blockchains

The tokenization journey is not a single path and involves both public and private blockchains, which offer a spectrum of benefits and trade-offs, including speed, privacy and interoperability.

The Canton Network and Project Guardian both showcase the industry's commitment to testing the feasibility of applications in asset tokenization and decentralized finance (DeFi) across different blockchains. For instance, Cumberland, T. Rowe, Wellington, and WisdomTree have chosen the public blockchain Avalanche and the Evergreen subnet Spruce to test DeFi applications for FX and interest-rate swaps, among other areas.

While private blockchains have captured attention, further exemplified by [KKR's tokenization](#) of their fund on Avalanche (via Securitize), most sell-side focus currently centers around private, permissioned chains. Several leading banks, including Goldman Sachs, are actively exploring opportunities on private blockchains, emphasizing the development of robust infrastructure. Moreover, [Swift](#) announced a partnership with Chainlink to connect multiple blockchains for movement of tokenized assets, demonstrating that the industry can be agnostic to chains.

Interoperability and Guardrails: Navigating the Unknown

However, as the sector forges on, the need for guardrails is clear. Europe's DLT pilot regime and the FCA Regulatory Sandbox offer legal avenues for experimentation. But the road ahead will require the integration of permissioned networks with public networks, which may challenge these sandboxes.

Privacy is also a lynchpin of financial markets and a key focus of the Canton Network, a piece of the potential puzzle. Other options like Ownera are exploring conventional routing systems among different blockchain applications, but there is no clear answer to both interoperability and privacy.

Data and Infrastructure: The Cornerstones of Transformation

As the financial industry embraces tokenization, the implications for data and infrastructure requirements are profound. Intermediaries are actively seeking data, tools and platforms. On the data side, market data, on-chain activity data and DeFi data are being sought out, alongside the necessary infrastructure for tokenization projects that include regulated platforms and other third-party applications. Moreover, traditional accounting functions, custody systems and settlement mechanisms must also evolve to accommodate the data deluge from DeFi.

With industry giants now actively involved in projects and initiatives, the fusion of crypto ingenuity with traditional market principles is reshaping the financial landscape. For banks, the tokenization of assets and the embrace of DeFi mark the dawn of a new era in finance, laying the foundation for the next generation of markets.

Coalition Greenwich, a division of CRISIL, an S&P Global Company, is a leading global provider of strategic benchmarking, analytics and insights to the financial services industry.

We specialize in providing unique, high-value and actionable information to help our clients improve their business performance.

Our suite of analytics and insights encompass all key performance metrics and drivers: market share, revenue performance, client relationship share and quality, operational excellence, return on equity, behavioral drivers, and industry evolution.

About CRISIL

CRISIL is a leading, agile and innovative global analytics company driven by its mission of making markets function better. It is majority owned by S&P Global Inc., a leading provider of transparent and independent ratings, benchmarks, analytics, and data to the capital and commodity markets worldwide.

CRISIL is India's foremost provider of ratings, data, research, analytics, and solutions with a strong record of growth, culture of innovation, and global footprint.

It has delivered independent opinions, actionable insights and efficient solutions to over 100,000 customers through businesses that operate from India, the U.S., the U.K., Argentina, Poland, China, Hong Kong, and Singapore.

The Document is not an investment analysis or research and is not subject to regulatory or legal obligations on the production of, or content of, investment analysis or research.

The data contained in the Document is based upon a particular bank's scope, which reflects a bank's data submission, business structure, and sales revenue Reporting methodology. As a result, any data contained in the Document may not be directly comparable to data presented to another bank. For franchise benchmarking, Crisil Coalition Greenwich has implemented equal ranking logic on aggregate results i.e., when sales revenues are within 5% of at least one competitor ahead, a tie is shown and designated by = (where actual ranks are shown). Entity level data has no equal ranking logic implemented and therefore, on occasion, the differences between rank bands can be very close mathematically.

The data in this Document may reflect the views reported to Crisil Coalition Greenwich by the research participants. Interviewees may be asked about their use of and demand for financial products and services and about investment practices in relevant financial markets. Crisil Coalition Greenwich compiles the data received, conducts statistical analysis and reviews for presentation purposes to produce the final results.
