

Electronic Trading Growth in Convertible Bonds

November 14, 2024

Executive Summary:

Convertible bonds combine elements of bonds, stocks and derivatives, making them a unique asset class. Electronic trading has transformed the convertible bond market, driving improved execution quality, efficiency, and competition.

Coalition Greenwich research in 2020 examining the convertible bond market found that electronic trading had “wrought meaningful change, creating significant value for market participants.” In the years since, electronic trading adoption has accelerated, driving improved execution quality and additional efficiency for market participants.

An emphasis on best execution has led to increased interest in and use of multidealer platforms (MDPs). These electronic platforms provide a centralized hub for investors to compare prices across multiple dealers, increasing competition and driving down their trading costs.

Nearly one-third of convertible bond investors now trade convertible bonds electronically. Additionally, 13% who aren’t currently utilizing electronic trading expect to do so in the next two years.

As traders become more comfortable with electronic trading, they’re starting to place larger orders. Trades over \$5 million are growing over 45% year over year on Tradeweb, one of the largest MDPs for U.S. convertible bonds.

Electronic trading offers benefits beyond improved execution quality, including pre-trade transparency, real-time executable prices and automation of manual processes. Dealers are integrating their internal systems with MDPs, leveraging the “buy, build, and integrate” approach. Convertible bond traders are now demanding the same tools and automation as their colleagues in other asset classes. With the right incentives and tools, even less-liquid products like convertible bonds can be traded electronically.

Methodology:

Between January and June 2024, Coalition Greenwich interviewed 141 investors at funds domiciled in North America and Europe that trade U.S. convertible bonds. Respondents were asked a series of questions about their activity in the U.S. convertibles market, including the proportion of convertibles volume executed via multidealer platforms, as well as key factors that are most important to the trader when deciding which broker to engage.

Data from Tradeweb, a multidealer platform operating an RFQ market for convertible bonds, was also analyzed to better understand market liquidity and participation.

Nor should this Document, or any part of it, form the basis to be relied upon in any way in connection with any contract relating to any securities. The Document is not an investment analysis or research and is not subject to regulatory or legal obligations on the production of, or content of, investment analysis or research.

The data contained in the Document is based upon a particular bank's scope, which reflects a bank's data submission, business structure, and sales revenue Reporting methodology. As a result, any data contained in the Document may not be directly comparable to data presented to another bank. For franchise benchmarking, Crisil Coalition Greenwich has implemented equal ranking logic on aggregate results i.e., when sales revenues are within 5% of at least one competitor ahead, a tie is shown and designated by = (where actual ranks are shown). Entity level data has no equal ranking logic implemented and therefore, on occasion, the differences between rank bands can be very close mathematically.

The data in this Document may reflect the views reported to Crisil Coalition Greenwich by the research participants. Interviewees may be asked about their use of and demand for financial products and services and about investment practices in relevant financial markets. Crisil Coalition Greenwich compiles the data received, conducts statistical analysis and reviews for presentation purposes to produce the final results.
