

Electronification is set to grow in MBS markets

February 4, 2025

Executive Summary:

The U.S. mortgage-backed securities (MBS) market is one of the largest and most liquid in the world. At the end of Q3 2024, \$1.1 trillion MBS securities were issued—a 12.5% increase year over year. To put that figure in perspective relative to other fixed-income markets, \$1.6 trillion in U.S. corporate bonds and \$3.5 trillion in U.S. Treasury securities were also issued over the same period. MBS accounts for roughly 13% of all U.S. bond issuance.

From a trading vantage point, MBS products represent almost a quarter of the average daily volume of U.S. fixed-income trading. Although some products within the asset class are notoriously illiquid, and trading mechanisms are in need of modernization, tides are changing as investment professionals and traders alike embrace more electronification. This is particularly true in the trading of certain over-the-counter (OTC) mortgage products, such as specified pools, commercial mortgage-backed securities (CMBS), collateralized mortgage obligations (CMOs), asset-backed securities (ABS), and other areas where risk transfer has historically happened over the phone or via chat.

Fixed-income electronic trading has been evolving in dribs and drabs. For instance, only one-third of investment-grade corporates were traded electronically in 2020 versus about half today. We expect a jump in MBS electronification in the next few years motivated by similar forces—efficiency, enhanced transparency and evolving TRACE reporting requirements. Further, trading venues are improving their offerings to enable portfolio managers (PMs) and traders to create more streamlined workflows and electronify the trading process. These catalysts, coupled with buy-side demand for electronic liquidity and new liquidity providers—both bank and nonbank—ensure future progress.

Methodology:

Between September and November 2024, Crisil Coalition Greenwich interviewed a total of 39 U.S. buy-side mortgage market participants to better understand the drivers of decision-making tied to the electronification of MBS markets. The majority of responses came from professionals working at asset management firms, with

experts hailing from hedge funds and insurers making up the balance. Data and insights from Tradeweb, a multidealer platform, were also analyzed to better understand market liquidity and participation.

Assets under management (AUM) varied across participants. Looking across firm types, the distribution of roles was tilted toward portfolio managers, with traders and heads of trading accounting for about one-third of participation.

Respondents

Note: Based on 39 respondents. Numbers may not total 100% due to rounding.

This Document may contain analysis of commercial data relating to revenues, productivity and headcount of financial services organisations (together with any other commercial information set out in the Document). The Document may also include statements, estimates and projections with respect to the anticipated future performance of certain companies and as to the market for those companies' products and services.

The Document does not constitute (or purport to constitute) an accurate or complete representation of past or future activities of the businesses or companies considered in it but rather is designed to only highlight the trends. This Document is not (and does not purport to be) a comprehensive Document on the financial state of any business or company. The Document represents the views of Crisil Coalition Greenwich as on the date of the Document and Crisil Coalition Greenwich has no obligation to update or change it in the light of new or additional information or changed circumstances after submission of the Document.

This Document is not (and does not purport to be) a credit assessment or investment advice and should not form basis of any lending, investment or credit decision. This Document does not constitute nor form part of an offer or invitation to subscribe for, underwrite or purchase securities in any company. Nor should this Document, or any part of it, form the basis to be relied upon in any way in connection with any contract relating to any securities. The Document is not an investment analysis or research and is not subject to regulatory or legal obligations on the production of, or content of, investment analysis or research.

The data contained in the Document is based upon a particular bank's scope, which reflects a bank's data submission, business structure, and sales revenue Reporting methodology. As a result, any data contained in the Document may not be directly comparable to data presented to another bank. For franchise benchmarking, Crisil Coalition Greenwich has implemented equal ranking logic on aggregate results i.e., when sales revenues are within 5% of at least one competitor ahead, a tie is shown and designated by = (where actual ranks are shown). Entity level data has no equal ranking logic implemented and therefore, on occasion, the differences between rank bands can be very close mathematically.

The data in this Document may reflect the views reported to Crisil Coalition Greenwich by the research participants. Interviewees may be asked about their use of and demand for financial products and services and about investment practices in relevant financial markets. Crisil Coalition Greenwich compiles the data received, conducts statistical analysis and reviews for presentation purposes to produce the final results.
