

# Don't Blame Low Volatility on Complacency

August 4, 2014

Over the last few weeks many have speculated that low volatility must mean that investors are complacent. As I was writing this post, in fact, an email came through about [a new volatility study from ConvergeX](#) showing that half of their study respondents perceived investors to be too complacent, especially when it came to equity markets. Between the Ukraine, the Middle East, multi-asset bank scandals and bond and equity markets so high that a correction must be on its way, what other explanation could there be for the fear gauge hovering in the 10-12 range besides complacency?

I don't know about you, but I have yet to meet an institutional investor who is ever complacent. Every single day is a mad dash to increase returns, attract investment dollars and do whatever is necessary to get a big bonus. This is true across the country, whether a hedge fund in New Mexico or an Asset Manager in NY. So no, complacent investors are not causing low volatility and low volatility is not causing investors to be complacent. And for the small few out there who are in fact complacent and hence unhedged, time to rethink your positioning.

So what does low volatility mean? The Fed continues to be transparent about its bond buying and low rate policy, and the market believes them. A rate rise is inevitable and QE will end in a few months, but the market feels either it knows exactly how and when those events will transpire or that its portfolios are properly positioned for whenever it does.

As for the equity market, that is starting to feel a bit more like irrational exuberance than complacency. What I find interesting is that no one is admitting to being complacent, but as the ConvergeX study shows market participants are happy to put that label on others.

Nevertheless, low vol in equity markets is starting to feel like a cyclical phenomenon. The last two long stretches of low volatility, pre dot-com and post dot-com, lasted about three years or so. We're only about a year in, which might lead you to believe we still have some ways to go. Secondly, talk that the equity markets are overvalued and can't go any higher is something we've all heard before. Will it go down eventually? Yes. Will there be more vol eventually? Of course. But trying to guess when is nearly impossible. This is in part why some investors are staying on the sidelines. Not only is guessing the downturn near impossible, but markets are expecting a downturn in both equities and fixed income, leaving many - especially retail investors - with no where to turn.

Bottom line, there are real economic explanations for low volatility, but the catch all of complacency is not one of them.

Coalition Greenwich, a division of CRISIL, an S&P Global Company, is a leading global provider of strategic benchmarking, analytics and insights to the financial services industry.

We specialize in providing unique, high-value and actionable information to help our clients improve their business performance.

Our suite of analytics and insights encompass all key performance metrics and drivers: market share, revenue performance, client relationship share and quality, operational excellence, return on equity, behavioral drivers, and industry evolution.

## About CRISIL

CRISIL is a leading, agile and innovative global analytics company driven by its mission of making markets function better. It is majority owned by S&P Global Inc., a leading provider of transparent and independent ratings, benchmarks, analytics, and data to the capital and commodity markets worldwide.

CRISIL is India's foremost provider of ratings, data, research, analytics, and solutions with a strong record of growth, culture of innovation, and global footprint.

It has delivered independent opinions, actionable insights and efficient solutions to over 100,000 customers through businesses that operate from India, the U.S., the U.K., Argentina, Poland, China, Hong Kong, and Singapore.

Document, or any part of it, form the basis to be relied upon in any way in connection with any contract relating to any securities. The Document is not an investment analysis or research and is not subject to regulatory or legal obligations on the production of, or content of, investment analysis or research.

The data contained in the Document is based upon a particular bank's scope, which reflects a bank's data submission, business structure, and sales revenue Reporting methodology. As a result, any data contained in the Document may not be directly comparable to data presented to another bank. For franchise benchmarking, Crisil Coalition Greenwich has implemented equal ranking logic on aggregate results i.e., when sales revenues are within 5% of at least one competitor ahead, a tie is shown and designated by = (where actual ranks are shown). Entity level data has no equal ranking logic implemented and therefore, on occasion, the differences between rank bands can be very close mathematically.

The data in this Document may reflect the views reported to Crisil Coalition Greenwich by the research participants. Interviewees may be asked about their use of and demand for financial products and services and about investment practices in relevant financial markets. Crisil Coalition Greenwich compiles the data received, conducts statistical analysis and reviews for presentation purposes to produce the final results.
