

Commission Rates Are Only Part of Story in Managing Spend

April 16, 2015

Our recent report, “Equity Trade Commissions: Rates Vary Broadly Across and Within Markets,” highlighted an interesting finding from a Greenwich Associates study: average bundled commission rates on equity trades are surprisingly consistent across large and small institutions.

We should stress that headline rates are not the primary determinant for what an institution spends overall and should not be viewed in isolation. More specifically, it is turnover or velocity of trading – typically a function of multiple and varying investment strategies employed by funds – that when combined with rates in turn determines an institution’s aggregate spend.

Contrary to an assertion made in a press article referencing our report, these data in no way suggest that institutions—large or small—are getting overcharged or being sloppy in managing trading costs. Institutional investors have become proactive and skilled at managing those costs.

First, a deeper look at the facts: The table below shows average commission rates on high-touch bundled trades, high-touch execution only trades and high-touch “tack-on,” rates using the large U.K. market as an example. The data reveal considerable variation not only from trade type to trade type, but also in the minimum and maximum rates reported within a given execution type.

Average Commission Rates — U.K. Equities European and U.S. Equity Investors (86)

	High-Touch Bundled	High-Touch Execution-Only	High-Touch Tack-On
Respondents	(86)	(53)	(46)
Maximum	22.5	15.0	15.5
Minimum	6.0	2.6	2.0
Median	15.0	7.0	8.0
Unweighted Average			
Large Accounts*	14.2	7.0	8.0
Total Institutions	14.6	7.4	8.0

Note: In basis points. *Large accounts represent roughly the 30% of institutions which generate roughly 70% of commissions. Source: Greenwich Associates 2014

These different types of trades and varying average rates represent the tools institutional investors use to manage the costs of both executing trades and compensating brokers for research and advisory services. Institutional investors typically employ high-touch bundled trades with a given broker until they reach a

target level that fairly compensates the firm for research and advisory services. There are further differences in how each investor values specific elements of research. After that, trading switches to much lower cost execution-only and low-touch electronic trades. This actively managed channel mix of execution types has an obvious impact on lowering the effective blended-average rate paid by a given institution.

Rather than reflecting any shortcomings to the system, this result suggests institutional investors are employing diverse and sophisticated approaches. In fact, these approaches are providing precisely the type of aggressive cost management pushed for by regulators and demanded by clients.

Coalition Greenwich, a division of CRISIL, an S&P Global Company, is a leading global provider of strategic benchmarking, analytics and insights to the financial services industry.

We specialize in providing unique, high-value and actionable information to help our clients improve their business performance.

Our suite of analytics and insights encompass all key performance metrics and drivers: market share, revenue performance, client relationship share and quality, operational excellence, return on equity, behavioral drivers, and industry evolution.

About CRISIL

CRISIL is a leading, agile and innovative global analytics company driven by its mission of making markets function better. It is majority owned by S&P Global Inc., a leading provider of transparent and independent ratings, benchmarks, analytics, and data to the capital and commodity markets worldwide.

CRISIL is India's foremost provider of ratings, data, research, analytics, and solutions with a strong record of growth, culture of innovation, and global footprint.

It has delivered independent opinions, actionable insights and efficient solutions to over 100,000 customers through businesses that operate from India, the U.S., the U.K., Argentina, Poland, China, Hong Kong, and Singapore.

The data contained in the Document is based upon a particular bank's scope, which reflects a bank's data submission, business structure, and sales revenue Reporting methodology. As a result, any data contained in the Document may not be directly comparable to data presented to another bank. For franchise benchmarking, Crisil Coalition Greenwich has implemented equal ranking logic on aggregate results i.e., when sales revenues are within 5% of at least one competitor ahead, a tie is shown and designated by = (where actual ranks are shown). Entity level data has no equal ranking logic implemented and therefore, on occasion, the differences between rank bands can be very close mathematically.

The data in this Document may reflect the views reported to Crisil Coalition Greenwich by the research participants. Interviewees may be asked about their use of and demand for financial products and services and about investment practices in relevant financial markets. Crisil Coalition Greenwich compiles the data received, conducts statistical analysis and reviews for presentation purposes to produce the final results.
