

Japanese Desks Move Away from High-Touch, But Uniquely Reliant on Portfolio Trades

April 13, 2015

Larger institutions in Japan now execute only roughly 41% of trades as traditional single stock high-touch trades, well down from 48% in 2011.

This reflects low touch single stock trades rising from 33% of trading volume to 36% and an expected 40% by 2017, but also somewhat unique to Japan the high proportion of business executed as portfolio trades which has climbed to 23% over the past three years driven by the high volume of business executed as portfolio trades by domestic Japanese institutions particularly trust banks with large passive portfolios.

Proportion of Greenwich Priorities' Trading Value Done via Electronic Trades Japanese Equities

Note: Based on Greenwich Associates Priorities that generated 70-80% of commissions in respective products. Source: Greenwich Associates 2014 Japanese Equity Investors Study

Study Highlights

- Japanese institutions have been particularly aggressive at driving down “headline” commission costs, not only adopting portfolio and electronic trading but executing a significant proportion of portfolio trades as risk trades with only a quarter of volume as “pure agency.”
- Unlike Asia, the commission pool in Japanese equities has been on an upswing, increasing as much as 30% over the past two years and bringing improved liquidity to a large and fairly homogenous market.
- Roughly 60% of commission flows are allocated as compensation for research and advisory services and 20% of assets are invested in small/mid-cap shares, both lower than in Asia and arguably allowing for greater use of low/no-touch avenues of execution.

Demand for capital (outside of risk portfolio trades) also is not a major constraint: while nearly 60% of larger accounts request capital, but for only 4% on average of trading volume.

Bottom Line

Japanese institutional investors have effectively availed themselves of low cost avenues of execution, but at the expense of less direct interaction with sales traders who can provide market color and insight.

Investors should consider what is the appropriate balance of low-touch and high-touch execution for both managing execution costs and maintaining access to essential broker information services.

The Document is not an investment analysis or research and is not subject to regulatory or legal obligations on the production of, or content of, investment analysis or research.

The data contained in the Document is based upon a particular bank's scope, which reflects a bank's data submission, business structure, and sales revenue Reporting methodology. As a result, any data contained in the Document may not be directly comparable to data presented to another bank. For franchise benchmarking, Crisil Coalition Greenwich has implemented equal ranking logic on aggregate results i.e., when sales revenues are within 5% of at least one competitor ahead, a tie is shown and designated by = (where actual ranks are shown). Entity level data has no equal ranking logic implemented and therefore, on occasion, the differences between rank bands can be very close mathematically.

The data in this Document may reflect the views reported to Crisil Coalition Greenwich by the research participants. Interviewees may be asked about their use of and demand for financial products and services and about investment practices in relevant financial markets. Crisil Coalition Greenwich compiles the data received, conducts statistical analysis and reviews for presentation purposes to produce the final results.
