

The Continuing Corporate Bond Evolution

December 3, 2015

Executive Summary:

Electronic trading in U.S. investment-grade corporate bonds has reached 20% of total market volume in 2015.

While low relative to other markets, this represents 25% growth year-over-year. The buy side reports improving liquidity, but the source of that improvement is unclear.

There has been a tremendous push for new e-trading methods for corporate bonds, and an increasing interest in all-to-all platforms.

In both investment-grade and high-yield, new trading protocols and platforms allow not only for different methods of trade execution, but also for execution of trades that otherwise would not have been consummated at all.

Methodology:

The data reported in this document reflect solely the views reported to Greenwich Associates by the research participants. Interviewees may be asked about their use of and demand for financial products and services and about investment practices in relevant financial markets. Greenwich Associates compiles the data received, conducts statistical analysis and reviews for presentation purposes in order to produce the final results. Unless otherwise indicated, any opinions or market observations made are strictly our own.
