

Versatility Fuels Expansion: ETFs in Canadian Institutional Portfolios

January 21, 2016

Executive Summary:

The results of the Greenwich Associates 2015 Canadian Exchange-Traded Funds Study show that Canadian institutions rank as some of the most active and sophisticated ETF investors in the institutional marketplace. Among the trends placing Canadian institutions at the head of the global pack:

1. In addition to using ETFs for tactical portfolio functions, Canadian institutions are employing the funds to obtain long-term exposures central to their investment strategies. Sixty-three percent of Canadian institutional ETF assets today are categorized as strategic, with portfolio diversification and obtaining core investment exposures cited as the top two reasons for ETF use.
2. Canadian institutions are moving faster than their counterparts in other markets to adopt ETFs in fixed income and other asset classes beyond equities. Sixty-eight percent of Canadian institutional ETF users employ the funds in fixed income. That share is expected to increase as investors respond to the shifting interest-rate environment and move to address liquidity concerns.
3. Canadian institutions are early adopters of new ETF products. Forty-four percent of Canadian institutional ETF users employ non-market-cap weighted/smart-beta ETFs, with a sizable share of institutions using these innovative products in fixed income. Thirty-one percent of Canadian institutional ETF users invest in currency-hedged ETFs.
4. Canadian institutions have recognized ETFs' ability to deliver cost-effective beta and are actively replacing derivatives positions in their portfolios with ETFs. Eighty percent of the institutional ETF users in the study expect to replace an existing equity futures position with ETFs in the next year.

Based on these and other trends, nearly one-third of institutional ETF users in Canada plan to increase ETF allocations in the coming year. As they source new ETF investments, institutions are looking closely at ETF expense ratios and the alignment of individual funds with their own exposure needs.

Methodology:

Greenwich Associates interviewed 50 Canada-based institutional investors, 37 of which are exchanged-traded fund users and 13 are non-users, in an effort to track and uncover usage trends. Respondents included 33 asset managers that actively manage money for institutional funds, 12 institutional funds, including corporate pensions, public pensions, foundations, and endowments, and five insurance companies.

The Document is not an investment analysis or research and is not subject to regulatory or legal obligations on the production of, or content of, investment analysis or research.

The data contained in the Document is based upon a particular bank's scope, which reflects a bank's data submission, business structure, and sales revenue Reporting methodology. As a result, any data contained in the Document may not be directly comparable to data presented to another bank. For franchise benchmarking, Crisil Coalition Greenwich has implemented equal ranking logic on aggregate results i.e., when sales revenues are within 5% of at least one competitor ahead, a tie is shown and designated by = (where actual ranks are shown). Entity level data has no equal ranking logic implemented and therefore, on occasion, the differences between rank bands can be very close mathematically.

The data in this Document may reflect the views reported to Crisil Coalition Greenwich by the research participants. Interviewees may be asked about their use of and demand for financial products and services and about investment practices in relevant financial markets. Crisil Coalition Greenwich compiles the data received, conducts statistical analysis and reviews for presentation purposes to produce the final results.
