

ETFs: Dynamic Tools for Institutional Portfolios in Europe

March 3, 2017

Executive Summary:

Powerful market dynamics including quantitative easing by the ECB, increased market volatility and diminished liquidity in fixed income are causing European institutions to increase their use of exchange-traded funds (ETFs). The results of the Greenwich Associates 2016 European Exchange-Traded Funds Study show that institutional investors are turning to ETFs for liquidity, ease of use and fast access to exposures.

Institutions are taking full advantage of that versatility in equities, where ETFs now account for about a quarter of total assets among the 86% of study participants currently investing in the funds. Institutions' integration of bond ETFs is more of a work in progress. Nearly half the ETF users in the Greenwich Associates study use bond ETFs, but invest only 8% of total assets to the funds. Approximately 1 in 4 of these investors have been using the funds for less than two years, and 17% of users started investing in bond ETFs in the past 12 months.

Across asset classes, institutions are using ETFs for a diverse set of applications, ranging from high-level strategic functions like obtaining core exposures and achieving portfolio diversification, to making tactical portfolio adjustments and executing short-term tasks. ETFs are poised for further growth, with approximately a third of current equity ETF users planning to increase allocations to these funds in the year ahead, and 27% of bond ETFs users planning to do so. Among institutions in the study not currently investing in equity ETFs, nearly a quarter say they are at least somewhat likely to consider investing in the funds in 2017. Meanwhile, slightly more than 1 in 10 non-users of bond ETFs express similar plans.

Four major trends are contributing to this growth trajectory:

- **One-third of the institutions in the study say they are using ETFs to complement or replace other investment vehicles—a share that climbed from 29% in 2015.** Institutions currently use a variety of derivatives to access beta, such as futures, swaps, and options. Half of ETF users plan to replace an existing equity futures position with ETFs in the coming year, and 40% say they will evaluate futures positions for potential replacement.
- **Growing proportions of institutions are using ETFs to manage risk.** These increases likely reflect institutions' need for tools to help manage increased volatility associated with Brexit, as well as other structural changes and market events. ETFs are viewed as effective for managing liquidity, inflation, or concentration risk.
- **European institutions experiencing liquidity shortages in fixed income are turning to ETFs for relief.** The liquidity, speed and ease of use of bond ETFs could attract additional investors in 2017, as the European banks that institutions rely on for liquidity struggle to meet new capital requirements.

- **European institutions seeking new sources of returns and predictability in uncertain markets are triggering demand for innovative ETF products.** Approximately a quarter of institutional ETF investors are now using non-market-cap weighted/smart beta ETFs, up from 21% expecting to do so in 2015. Three-quarters of these users plan to increase allocations to these funds in the next year.

Methodology:

Between October and December 2016, Greenwich Associates interviewed 132 institutional investors for its 2016 European Exchange-Traded Funds (ETF) Study, including 65 institutional funds, 48 asset managers and 19 insurance companies/insurance company asset managers. Corporate pension funds and asset management firms are the most widely represented, followed by insurance companies and public pension funds.

Most of the participants are large institutions. Fifty-five percent of the institutions in the study have assets under management (AUM) of more than \$5 billion, one-third manage more than \$20 billion, and 1 in 5 have AUM in excess of \$50 billion. Respondents also represent a wide range of countries, including France, Germany, Italy, the Netherlands, Nordics, Spain, Switzerland, and the United Kingdom.

RESPONDENTS BY COUNTRY

Coalition Greenwich, a division of CRISIL, an S&P Global Company, is a leading global provider of strategic benchmarking, analytics and insights to the financial services industry.

We specialize in providing unique, high-value and actionable information to help our clients improve their business performance.

Our suite of analytics and insights encompass all key performance metrics and drivers: market share, revenue performance, client relationship share and quality, operational excellence, return on equity, behavioral drivers, and industry evolution.

About CRISIL

CRISIL is a leading, agile and innovative global analytics company driven by its mission of making markets function better. It is majority owned by S&P Global Inc., a leading provider of transparent and independent ratings, benchmarks, analytics, and data to the capital and commodity markets worldwide.

CRISIL is India's foremost provider of ratings, data, research, analytics, and solutions with a strong record of growth, culture of innovation, and global footprint.

It has delivered independent opinions, actionable insights and efficient solutions to over 100,000 customers through businesses that operate from India, the U.S., the U.K., Argentina, Poland, China, Hong Kong, and Singapore.

The Document is not an investment analysis or research and is not subject to

regulatory or legal obligations on the production of, or content of, investment analysis or research.

The data contained in the Document is based upon a particular bank's scope, which reflects a bank's data submission, business structure, and sales revenue Reporting methodology. As a result, any data contained in the Document may not be directly comparable to data presented to another bank. For franchise benchmarking, Crisil Coalition Greenwich has implemented equal ranking logic on aggregate results i.e., when sales revenues are within 5% of at least one competitor ahead, a tie is shown and designated by = (where actual ranks are shown). Entity level data has no equal ranking logic implemented and therefore, on occasion, the differences between rank bands can be very close mathematically.

The data in this Document may reflect the views reported to Crisil Coalition Greenwich by the research participants. Interviewees may be asked about their use of and demand for financial products and services and about investment practices in relevant financial markets. Crisil Coalition Greenwich compiles the data received, conducts statistical analysis and reviews for presentation purposes to produce the final results.
